

Violated Mathematic Nature Law by xe.com

The world institute for handling world wide Currencies Ratio's violated a (old but active) Mathematic Nature Law.

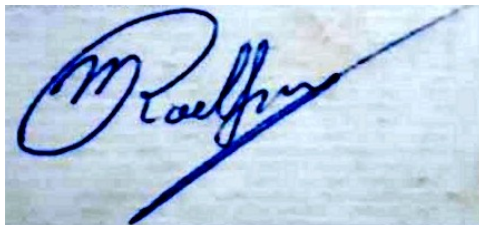

The violated Mathematic Nature Law is as follows:

Inside a scientific Table with numbers, when 1 or more of the numbers are not integers than all numbers must have the same amount of digits behind the dot.

This, to arrange the lowest amount of round up and or round down error(s) in further calculations.

Inside the table of all world currencies Ratio's, all ratios must have the same amount as digits xe.com to do the redeployment, That's a Commandment otherwise generating fantasy money is possible and that's unfair handling & trading on a world wide level.

I stay in status of Doctrine Yours,

[Marcel Alexander Roelfszema](#)

Highest Judge who handling the case at council
