

## Flashlight from brightness 10,000 lumens declared to weapon.

According to [ANSI-standards](#), the laboratory: "[uniquation.world](#)," in the context of flashlights,

has declared the boundary between tool & weapon from and above the brightness of: 10,000 lumens.

For example flashlight with 1.6 Km zoom lens shining from near distance to somebody's eye and 10.000 lumens entering the pupil for a time period of 1 second, victims eye need than immediate medical attention is required to save his or her eye(s). To make somebody blind is the marshal art power equal to that of Jesus Christ but to bully beat down that person after blinding him or her is not the power Jesus Christ but now the power for a aggressive person, and that's the reason of the weapon decadence.

This Protocol to accept International Law, which prescribes a necessary defence-related safety log book with the required stamp(s) and signature received after passing exams necessary to maintain after following the guidelines when using a flashlight that shines brighter than 10,000 lumens.

A handwritten signature in blue ink on a light-colored background, appearing to read 'M. Roelfszema'.

Citizen Ready Lieutenant Sir [Marcel Alexander Roelfszema](#)
