Subject: Command to remove all Hydracid from the market.

Physics Philosophical law: "For each electron around a nucleus, there should be 1 proton inside the nucleus, which spiral from within 3 quarks and their mutual gravitational forces spiral in a line of electron observation," & "In accordance with the two-slit experiment, we know that an observed electron always behaves as expected," theory so far *(Non Carcinogenic), Now the π (Carcinogenic) situation occurring in hydrazine: In Hydrazine there is a covalent bond in which N_2 - 2 Nitrogen nuclei share 1 electron, whereby $2 \times 3 = 6$ Quark their 6 strong nuclear forces go into 2 Spirals go into 2 stripe electron observation whereby 1 electron is not observed for a certain time and behaves randomly with a nucleus distance of (144.9 picometers) π such a distance does not occur in appendix Flora & Fauna where the maximum distance between 2 nuclei of nuclei in Binas is described under bases as (108.4 nanometers)*

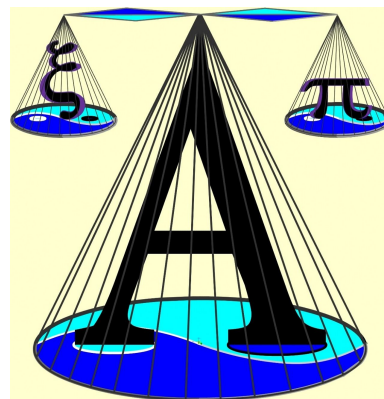

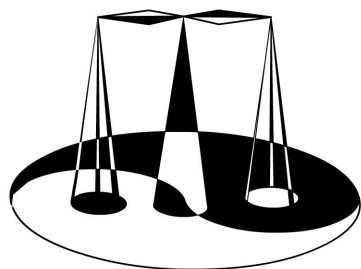

Hydracids belong to the Fungal World (Fungus), in Fauna it is found in Cancer Tumors & mushrooms such as mushrooms.

Ancient Egyptian & Turkey's moratorium reports on tumors after opening people who submitted their bodies to science with a diary with note of mushroom consumption from it to understand the term forbidden fruits.

Sincerely, I remain in the status of World Doctrine.
